

The Life Cycle of a Butterfly

1. A butterfly lays an eggs on a leaf and after a little while a larva Caterpillar appears out of the egg.

2. The caterpillar needs lots of food to grow. It eats the green leaves on the plant. It eats and eats until it is time to spin a pupa or Chrysalis.

3. Inside the cocoon, the caterpillar slowly changes into a butterfly. The butterfly comes out of the cocoon on it's wings dry in the sun before it flies away.
